

Confidential Evidence Document

Case File: #994-Alpha

Subject: Project Phoenix Financial Records

This document contains the financial records and audit findings for Project Phoenix.

The project was initiated on January 15, 2024, to overhaul the central database infrastructure.

During the audit conducted in March 2024, it was discovered that a sum of \$2.4 million was transferred to an offshore account without proper authorization. The transaction was approved by a user with the ID 'admin_jdoe'.

Further investigation revealed that 'admin_jdoe' had their credentials compromised on March 1, 2024, following a phishing attack. The phishing email contained a malicious payload that installed a keylogger on the user's workstation.

It is recommended that all administrative passwords be reset immediately and multi-factor authentication (MFA) be enforced for all high-privileged accounts.

End of Report.
